Making Your Hospital More Profitable

Tanjai Kapoor | Healthcare & Hospitals Marketing Leader

2026 | +91 9980096205 | [linkedin.com/in/tanjaikapoor](https://www.linkedin.com/in/tanjaikapoor)

The Marketing Vision

Patient First

A patient-first approach transforms healthcare delivery from transactional to relational. When hospitals prioritise patient needs, experience, and outcomes above all else, they build trust that drives loyalty and word-of-mouth referrals. This philosophy guides every marketing decision, service design, and operational choice.

By placing patients at the centre of everything we do, hospitals create emotional connections that differentiate them in competitive markets. From the first digital touchpoint to post-treatment follow-up, every interaction reinforces the commitment to exceptional care. This approach doesn't just improve satisfaction scores—it drives revenue growth through repeat visits and physician referrals.

Hospital Career Highlights

Transforming healthcare businesses from concept to profitability through strategic marketing and operational leadership.

01

Launch and Growth of 475-Bed Super-Specialty JCI Hospital

SP Medifort, Thiruvananthapuram, Kerala

Commissioned April 2024. Achieved INR 1,700 million revenue and 149,500 OP footfall in first full year. Built brand awareness across Kerala and South Tamil Nadu through neighbourhood campaigns, specialty launches, and digital marketing with low CPM.

02

Business Turnaround Strategy

Paras Hospitals, Panchkula

232-bed super-specialty facility. Delivered INR 510 million revenue in Q1 FY23 (108% of budget), on track for INR 2,050 million FY23. Implemented comprehensive marketing and operational strategies to drive growth.

03

Launch and Revenue Ramp-Up

Apollo Hospitals, Mumbai

500-bed super-specialty hospital. Successfully launched services achieving 95% occupancy, break-even within 18 months. Generated INR 2,760 million revenue FY18 (127% of budget) through strategic positioning and specialty marketing.

04

Business Turnaround and Marketing

Global Hospitals

Loss-making 500-bedded facility. Achieved EBITDA break-even, tripled occupancy to 225 beds, delivered 60% revenue growth to INR 760 million through repositioning and aggressive marketing campaigns.

05

Marketing, Repositioning and Launch

HCG Enterprises Cancer Hospitals

18 cancer hospitals. Attained 160% of CyberKnife revenue budget, EBITDA ~35%, payback in 2 years. Drove ~55% revenue growth to INR 1,850 million through innovative marketing and technology positioning.

About Myself

28+ Years Experience

Chief Marketing Officer with cross-functional expertise in hospitals, healthcare, health tech, biopharma, and consumer goods sectors

360° Skills

Profit centre management (P&L), B2C and B2B marketing, corporate sales, key account management, brand strategy, digital marketing, pricing, communications, and demand generation

Revenue Delivery

Delivered up to INR 6,050 million revenue and promoted multi-specialty tertiary care services including cardiac sciences, orthopaedics, gastroenterology, neuroscience, organ transplants, oncology, pulmonology, and renal sciences

Managed teams of 120+ people while spearheading innovative sales and brand strategies. Worked with 9,000+ referring physicians, 300+ corporate clients, 33+ insurance companies, and executed international marketing across 30+ countries.

Core competencies include digital marketing (15 years), e-commerce strategy (4 years), SEO, SEM, social media marketing, website development, lead generation, web analytics, CRM, and data analytics (Google certified).

Launch and Ramp-Up Greenfield 475-Bed Multi-Specialty Hospital

Thiruvananthapuram, Kerala

Brand Legacy

SP Fort has 27+ years reputation in South Kerala as orthopaedics and trauma care specialist

New Facility

Brand new 475-bed multi-specialty hospital SP Medifort commissioned April 2024

Market Expansion

Build awareness across Kerala and South Tamil Nadu

Executive Summary

Strategic Approach to Hospital Launch and Growth

Business Scenario

- SP Fort has 27+ years presence in South Kerala as orthopaedics & trauma care specialist
- Brand new 475-bed multi-specialty hospital SP Medifort commissioned April 2024
- Need to build awareness and image of world-class services and technology across Kerala and South Tamil Nadu

Marketing Strategy

- Brand building focusing on JCI quality, modern facility USPs, patient care, latest technology, and celebrity events
- Intense neighbourhood campaigns with events, camps, talks, and memberships
- Focus on specialty services: cardiology, neuroscience, oncology, renal sciences
- Launch and ATL promotion of specialties, health days, and health check packages
- Digital marketing, social media, video content with very low CPM

Brand Positioning Platform Built on Large Modern Infrastructure, First-in-Region Technology & Smart Systems

Strategic placement in leading print media established SP Medifort as Kerala's premier healthcare destination. The campaign emphasised the hospital's cutting-edge technology, modern infrastructure, and commitment to world-class patient care.

Print advertising reached high-value demographics across Kerala and South Tamil Nadu, building credibility and awareness amongst affluent patients and corporate decision-makers. The messaging focused on JCI accreditation, advanced medical equipment, and specialist expertise.

KERALA'S FIRST AMONG WORLD'S BEST

SP Medifort is Kerala's first hospital to
get the JCI 8th Edition Accreditation

The globally-revered JCI (Joint Commission International) has bestowed SP Medifort with its Gold Seal of Approval*. This prestigious certification is a testament to our unwavering commitment to world-class patient care, safety, and clinical excellence.

This recognition will strengthen our mission to provide the best medical expertise, the most advanced facilities, and state-of-the-art technology, ensuring that every patient receives treatment that is affordable and at par with the world's best hospitals. Because at SP Medifort, it all comes down to one thing. You First. Always.

WORLD-CLASS FACILITIES

Spread across 5,00,000 Care Feet

- Intelligent 3D Cath Lab (GE Allia)
- Fully motorized X-ray suite with AI
- 24x7 Remote Patient Monitoring
- Robotic 4K Surgical Microscope

BRAND POSITIONING

Launch Communication: Robotic Surgery

"The Future of Surgery That Is Safer" — SP Medifort introduces robotic-assisted surgery to Kerala, redefining what modern healthcare looks like. When life is moving ahead, care must move with it.

Precision & Less Invasive

Robotic systems deliver sub-millimeter accuracy, minimizing tissue damage and surgical risk.

Advanced Reach

Enables procedures in anatomically complex areas that are difficult via traditional methods.

Patient Comfort

Smaller incisions translate to less pain, reduced blood loss, and shorter hospital stays.

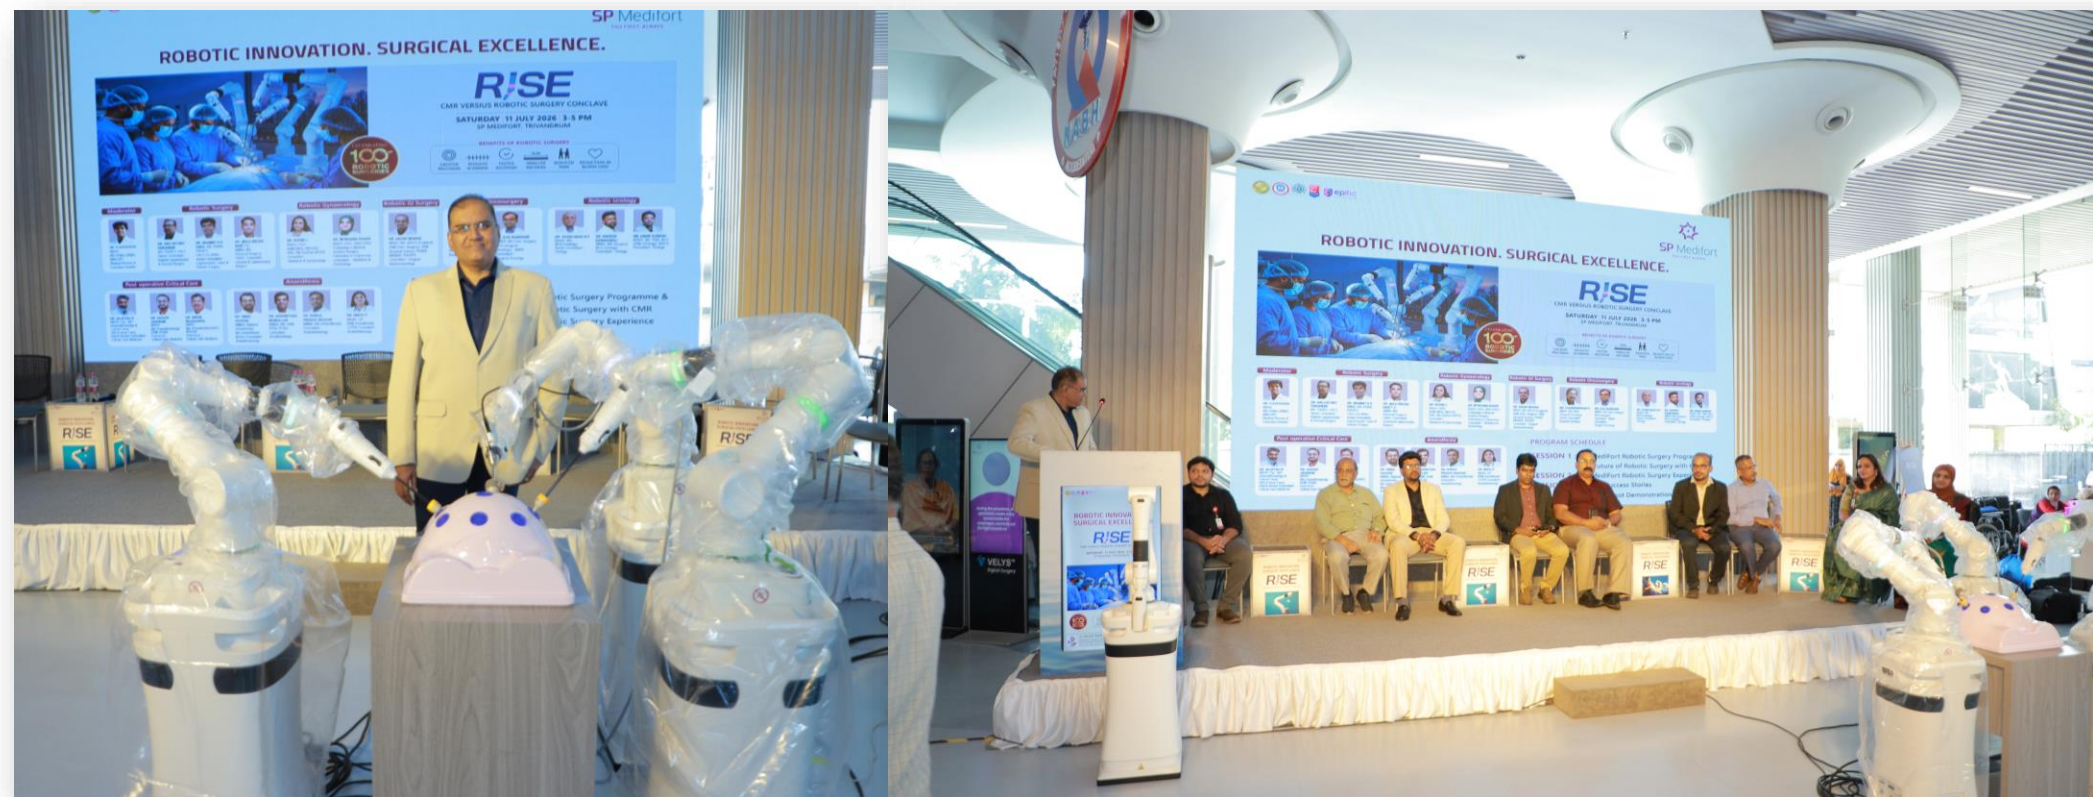

Faster Recovery

Patients return to normal life significantly sooner — Think Tomorrow, Choose Robotics.

RISE: Robotic Surgery Conclave

July 2026

SP Medifort organized a robotic surgery conclave to showcase the benefits of CMR VERSIUS for patients with a live demo and a panel discussion with 10 robotic surgeons across specialties.

SP medifort marks 100 robotic surgeries

PNS ■ Thiruvananthapuram

In a rare achievement, JCI and NABH-accredited SP Medifort Hospital has completed 100 robotic-assisted surgeries using the state-of-the-art CMR Versius Robotic Surgical System. To commemorate this the hospital organised 'RISE – CMR Versius Robotic Surgery Conclave.'

The conclave provided first-hand insights into the benefits and advancements of robotic-assisted surgery. The event featured a live demonstration of the CMR Versius Robotic Surgical System, interactive sessions with robotic surgeons, and testimonials from individuals who successfully underwent robotic procedures. Participants also had the opportunity to get a hands-on demo on the robot.

Dr S.P. Asokan, Chairman and Managing Director, said that the completion of 100 robotic surgeries reflects the Hospital's continued commitment to bring globally

Live demonstration of CMR Versius robot at SP Medifort, with Dr S.P. Asokan, Chairman & Managing Director, S.P. Subramonian, Joint Chairman & Managing Director, Executive Directors Dr S. Aathithya, Advaita A. Bala and a team of robotic surgeons.

advanced surgical technologies to Kerala, while S.P. Subramonian, Joint Chairman & Managing Director said the milestone underscored the hospital's focus on delivering safer, more precise, and patient-centric surgical care through innovation.

Robotic-assisted surgery is a major advancement in modern healthcare that combines the expertise of experienced surgeons with cutting-edge robotic technology. The CMR Versius Robotic Surgical System enables surgeons to perform complex procedures with exceptional precision while offering significant benefits to patients, including smaller incisions, reduced blood loss, less postoperative pain, lower risk of wound infections, shorter hospital stays, faster recovery, earlier return to normal activities, and improved cosmetic outcomes.

SP MEDIFORT HOSPITAL

Celebrity Launch of Mother & Baby Care with Pearle Maaney

March 2026

A landmark moment in women's and child health care — celebrated actress and new mother Pearle Maaney graced SP Medifort's exclusive 50,000 sq ft floor dedicated entirely to women and childcare. The event marked a new chapter in compassionate, world-class maternal health services.

BRAND POSITIONING

MAKING NEWS

SP Medifort hosts VELYS Robotic Knee Replacement Conclave

SP Medifort successfully hosted a Robotic Total Knee Replacement (TKR) Conclave, highlighting advanced orthopaedic care with the VELYS Robotic-Assisted Solution. As the first JCI-accredited hospital in the region and a "Great Place to Work" certified institution, it has performed over 500 TKRs, including 50+ robotic procedures. A team of 16 orthopaedic surgeons discussed how robotic technology is making knee replacement more precise, faster, safer, and personalised. The conclave's highlight was a live VELYS system demo, showcasing enhanced surgical accuracy and improved patient outcomes. S.P. Subramonian, JCMD of SP Medifort, encouraged the public to assess if surgery is needed for knee pain and explore robotic treatment options. The hospital also announced free knee consultations and affordable TKR packages for the first 100 registrations.

SP Medifort hosts conclave

SP Medifort successfully hosted a Robotic Total Knee Replacement (TKR) Conclave, showcasing the latest advancements in orthopaedic care with the VELYS Robotic-Assisted Solution. A team of 16 orthopaedic surgeons discussed how robotic technology is transforming knee replacement surgery. The highlight of the event was a live demonstration of the VELYS robotic system. Dr S Aathithya, executive and medical director, said that robotic-assisted knee replacement enables greater surgical precision. Dr SP Asokan, CMD, spoke about the importance of informed decision-making, encouraging patients to seek clarity before opting for surgery.

NEUROCARE

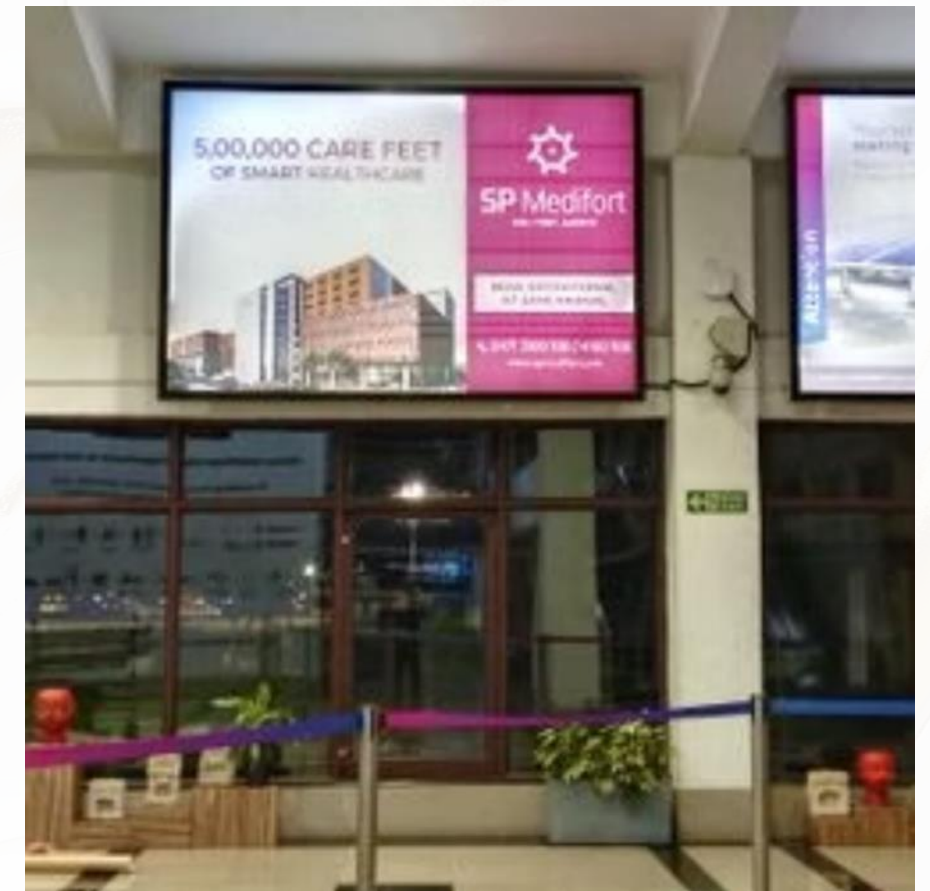

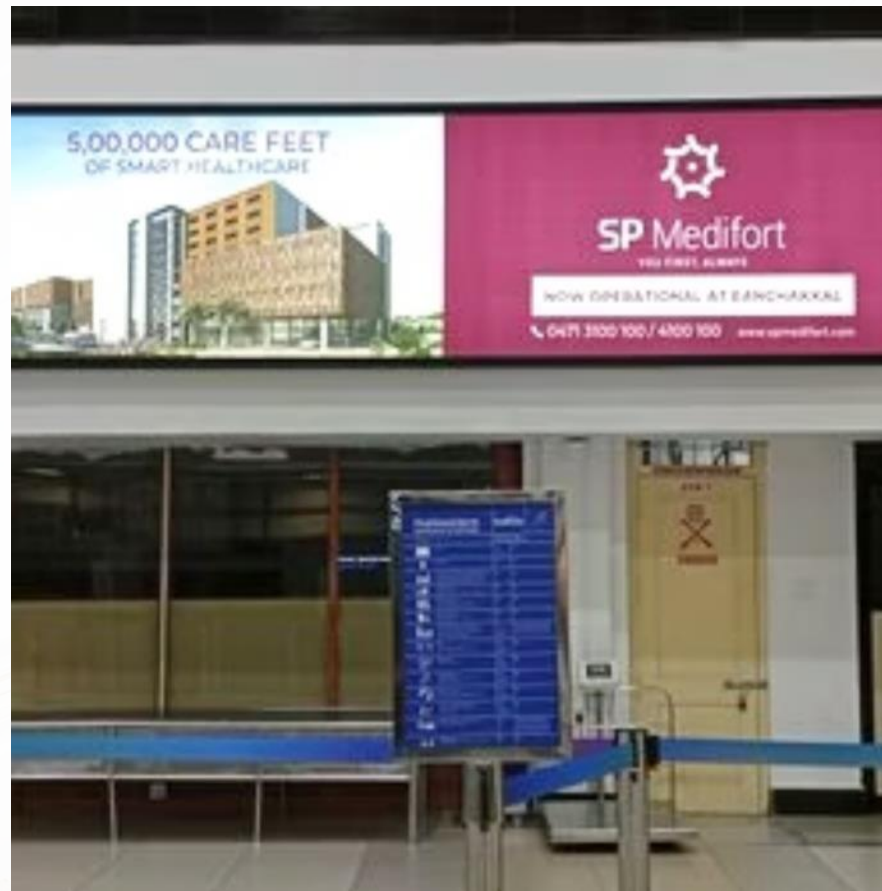

Welcome Communication: Neurocare Team

SP Medifort's Neurocare department welcomed its distinguished team with a launch communication designed to build trust, awareness, and confidence among patients and the wider medical community. The messaging spotlights the depth of neurological expertise now available under one roof — from stroke management and spine surgery to complex brain procedures.

OUT-OF-HOME

Airport Branding

SP Medifort's brand presence extends beyond the hospital — reaching patients and families at Thiruvananthapuram International Airport. Strategically placed branding at key touchpoints ensures that the first and last impression for travelers is one of trust, excellence, and world-class care. These placements reinforce SP Medifort's identity as Kerala's first JCI 8th Edition accredited hospital.

4 MAY

Center for Oncology Launch

SP Medifort's dedicated Center for Oncology was officially launched — a milestone event that brought together leading oncologists, hospital leadership, media, and distinguished guests. The center represents a significant investment in comprehensive cancer care for Kerala, offering state-of-the-art diagnostics, treatment, and patient support services all in one specialized facility.

11 MAY

Center for Pediatrics Launch

SP Medifort's Center for Pediatrics was inaugurated on 11 May — a joyful celebration of the hospital's deepened commitment to child health. The launch brought together pediatric specialists, proud parents, and hospital dignitaries to mark the opening of a nurturing, fully equipped environment dedicated to the health and well-being of Kerala's youngest patients.

22 MAY

SP MEDIFORT

Media Conference for Launch

On 22 May, SP Medifort hosted a formal media conference at the hospital, bringing together journalists, editors, and broadcast media to mark a series of landmark service launches. The event ensured extensive press coverage across print, digital, and broadcast platforms — amplifying SP Medifort's position as Kerala's most forward-thinking, internationally accredited hospital.

Doctors' Day: World's Shortest Doctor & Shadow Doctor Initiative

1 JULY

A memorable Doctors' Day celebration at SP Medifort brought together medical staff, community members, and special guests for a day of recognition, inspiration, and community engagement. The highlight was the participation of the World's Shortest Doctor — a truly extraordinary milestone — alongside the Shadow Doctor Initiative, which invited young aspirants to walk alongside physicians and experience the world of medicine firsthand.

Meta Advertising Analytics: FY26

4 Paise

Cost Per Reach — Meta Platforms

SP Medifort's Meta advertising campaigns for FY26 achieved an exceptional **cost per reach of just 4 paise** — a benchmark of outstanding media efficiency. This figure reflects highly optimized ad targeting, compelling creative content, and disciplined budget management across Facebook and Instagram platforms. Reaching each individual costs a fraction of a rupee, making Meta the most cost-effective channel in the hospital's digital marketing arsenal.

Hyper-Efficient Reach

At 4 paise per reach, SP Medifort's campaigns outperform industry norms significantly, stretching every rupee of marketing investment further.

Targeted Campaigns

Advanced audience segmentation on Meta platforms ensures ads reach the most relevant local community members and potential patients.

High ROI

Low cost-per-reach translates directly into measurable brand awareness gains and appointment inquiries at minimal incremental spend.

Facebook Benchmarking: March 2026

SP Medifort's Facebook performance benchmarked against industry and competitor standards, demonstrated strong standing across key engagement metrics.

The results confirm that the hospital's social media strategy is not only reaching a wide audience but doing so more effectively and economically than peers in the healthcare sector.

- ✔ SP Medifort's Facebook metrics consistently outpace healthcare industry benchmarks — a testament to the quality and relevance of our content strategy.

New hope for colon cancer patients

DR CHANDRABHAN K

Kerala. The trend is particularly concerning in urban areas, where lifestyle changes are more pronounced. Early detection rates in Kerala are improving due to better screening programmes and awareness campaigns, which are crucial for improving survival rates.

As medical science evolves, minimally invasive procedures are now available that give new hope for survivors of patients. The commonly practised procedures are combinations of different treatment methods known as multimodal therapy. This treatment involves several procedures that include surgery and adjuvant therapy.

Surgical treatments

Surgical procedure is broadly divided into curative surgery for rectal cancer and curative surgery for colon cancer. The type of surgery depends on the cancer's location, stage, and extent of spread. The goal of surgery is to remove the cancerous portion of the colon along with nearby lymph nodes and sometimes surrounding tissues.

There are numerous surgical options like polypectomy and local excision to treat the disease and ensure narrow down to a single option depending on the diagnosis and medical condition of the patient.

Of late, minimally invasive surgeries (MIS) are fast becoming a preferred treatment procedure for colon cancer. It plays a significant and evolving role, offering several advantages.

Understanding the lungs

DR VINAY P

On the third Wednesday of November every year, the Global Initiative for Chronic Obstructive Lung Disease (GOLD) organises World Chronic Obstructive Pulmonary Disease (COPD) Awareness Day in association with COPD patient groups and healthcare professionals. The day is observed to spread awareness about lung diseases, their prevention, and the importance of early diagnosis and management to avoid medical complications and fatalities.

This year's theme "Know Your Lung Function" underlines the importance of getting lung function tests, which can help diagnose, prevent, and treat COPD. The global initiative aims to raise awareness about the top three causes of death globally through it in preventable and curable. This is why awareness about the disease becomes important, especially in the wake of growing air pollution.

What is COPD?

COPD is a disease that affects the lungs. It is a condition in which the airways (tubes) in the lungs are permanently narrowed, accompanied by damage to the lung structure, particularly the small sacs of the lung that carry oxygen to the blood. These changes occur due to exposure to toxic air. As a consequence, patients develop difficulty in breathing.

What are the symptoms?

The primary symptoms in peripheral bronchitis, which worsens over time. Another common symptom is cough, which progresses from intermittent to persistent. Most patients also have increased phlegm.

How is it treated?

The main treatment is using medications that dilate the narrowed air-conducting tubes. This will reduce symptoms and improve the amount of oxygen in the blood. A small proportion of COPD patients will also require surgery to replace ventilation. There are also surgical options to treat the disease.

COPD exacerbation

A COPD exacerbation is often referred to as a "lung attack", which is akin to a heart attack in some respects. It is a condition in which symptoms with COPD develop acute breathing difficulty. An exacerbation will require an increase in the medication.

The writer is a senior consultant of respiratory medicine at SP Medcity Hospital

Understanding the risks and how to prevent it

DR VINAY P

Hypertension, often referred to as the "silent killer", is a widespread health threat that quietly damages the body and significantly increases the risk of heart disease, stroke, and kidney failure. According to the World Health Organization (WHO), over 1.2 billion adults worldwide suffer from hypertension, with a large proportion being unaware of their condition.

This year, May 17 marks the 20th anniversary of World Hypertension Day, a global initiative launched by the World Hypertension League (WHL) and first observed on May 17, 2003. World Hypertension Day aims to raise awareness about its serious medical complications, and also to provide information on its prevention, detection, and management.

Hypertension, or high blood pressure, occurs when the force of blood pushing against the walls of the arteries is consistently too high. It is diagnosed when blood pressure readings are consistently above 140/90 mmHg.

A recent study found the overall prevalence of hypertension in India to be 22.6%, with men (24.1%) exhibiting a higher prevalence than women (22.2%).

The prevalence increases sharply with age, reaching 44.4% among individuals aged 60 and above. The study also found that urban residents had a slightly higher prevalence (25.4%) than rural residents (21.4%), highlighting the rapid spread of hypertension across all populations.

Over time, the excessive pressure damages blood vessels and vital organs, leading to life-threatening complications such as heart attack, stroke, heart failure, kidney disease, and vision loss.

The most dangerous aspect of hypertension is that it often shows no symptoms until serious complications arise.

What is the danger?

Hypertension is a disease that affects the lungs. It is a condition in which the airways (tubes) in the lungs are permanently narrowed, accompanied by damage to the lung structure, particularly the small sacs of the lung that carry oxygen to the blood. These changes occur due to exposure to toxic air. As a consequence, patients develop difficulty in breathing.

What are the symptoms?

The primary symptoms in peripheral bronchitis, which worsens over time. Another common symptom is cough, which progresses from intermittent to persistent. Most patients also have increased phlegm.

How is it treated?

The main treatment is using medications that dilate the narrowed air-conducting tubes. This will reduce symptoms and improve the amount of oxygen in the blood. A small proportion of COPD patients will also require surgery to replace ventilation. There are also surgical options to treat the disease.

COPD exacerbation

A COPD exacerbation is often referred to as a "lung attack", which is akin to a heart attack in some respects. It is a condition in which symptoms with COPD develop acute breathing difficulty. An exacerbation will require an increase in the medication.

Rare finger reattachment surgery performed

EXPRESS NEWS SERVICE

A five-year-old boy who lost his middle finger in an accident recently underwent a successful and rare microsurgical reattachment surgery at SP Medcity Hospital here.

The child's finger was severed after he slipped and fell between gates while playing. Doctors removed the damaged portions and rejoined the bones using thin steel wires before attempting a highly complex microsurgical procedure.

The surgery, which lasted eight hours, involved a vein graft taken from the arm and the use of ultra-fine surgical threads to reconnect his blood vessels under a high-resolution operating microscope.

The operation was led by senior plastic surgeon Dr. Sreedhar Sreedharan, assisted by Dr. Raghav Raghav, Dr. Sreedhar Sreedharan, and Dr. Sreedhar Sreedharan.

Hospital authorities said the boy has recovered well. Doctors expect his finger

Paediatric urology: Why timely treatment matters

DR VIVEK PARAMESWARA SAMRA

GENTOURINARY disorders are among the most common surgical issues in children, comprising over 40 per cent of paediatric surgical cases seen in clinical practice. Many of these conditions stem from congenital defects present at birth, while others are acquired. The critical factors in managing these disorders are early diagnosis, appropriate treatment, and meticulous follow-up.

Urological issues in children

Paediatric urology addresses conditions such as fetal kidney swelling (fetal hydroureterosis), urine flow blockages (PUJ obstruction), backward urine flow (vesicoureteral reflux), and urinary tract infections (UTIs). It also includes undescended testicles, abnormal urethral openings (hypospadias), voiding disorders, and nerve-related bladder problems (neurogenic bladder).

Treatment for hypospadias

Hypospadias, a condition involving abnormal urethral openings, is one of the most common birth defects, affecting up to 1 in 200 newborns. Treatment typically involves

225

Beds Operational

Fully functional bed capacity supporting growing inpatient demand across all specialties.

₹50K+

ARPOB

Average Revenue Per Occupied Bed, reflecting strong case-mix and service quality.

81%

Occupancy Rate

Sustained occupancy well above break-even, driving profitability and operational efficiency.

18000+

OP Footfall

June 2026 OP footfall crossed 18000, with all specialties growing consistently

~2x

IP Growth

~ 100% growth in inpatient volumes of ~1200 achieved with focused execution.

Turning Around a Loss-Making Super-Specialty Hospital

A strategic, ground-up transformation of a 230-bed super-specialty hospital in Panchkula, North India — converting a loss-making institution into a thriving, EBITDA-positive healthcare destination serving the entire Tricity region and beyond.

The Challenge

A 230-bed corporate hospital struggling with low footfall, poor brand visibility, and a negative public perception around billing practices.

The Approach

Aggressive neighborhood outreach, specialty clinic launches, ATL campaigns, and a physician network of 850+ doctors across the region.

The Result

INR 500M+ revenue in Q1 FY23, highest-ever monthly revenue of INR 180M, and a successful turnaround to EBITDA-positive operations.

Executive Summary: Paras Hospitals Panchkula

Business Scenario

- Loss-making corporate hospital with low footfall
- Poor brand awareness across Tricity region
- Perception of inflated and "fake" billing practices
- Limited reach beyond the immediate city
- Challenging suburban location in Panchkula

Turnaround Plan

- Intense neighborhood campaigns with camps and talks
- Focus on high-margin services, networked with 850+ physicians
- Launch and ATL promotion of specialty clinics and health check packages
- Outreach OPD clinics across 11 locations – Karnal, Ambala, Shimla, Srinagar, Solan, Yamunanagar, Saharanpur

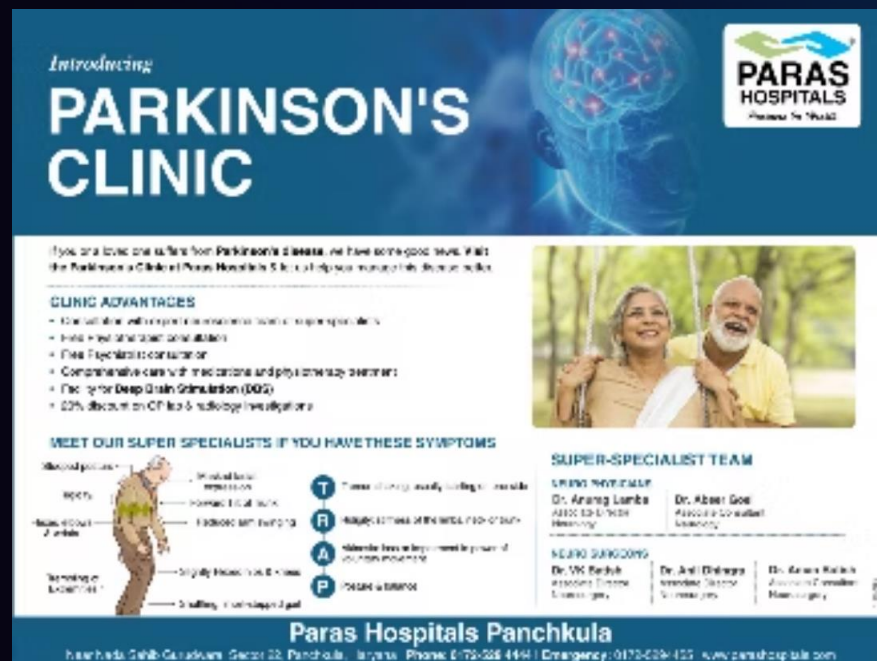

Outcome

- ~1,100 IP admissions per month
- 5,000 consultations per month
- Revenue of INR 500M+ in Q1 FY23 – 107% of budget achieved
- Highest-ever monthly revenue of INR 180 million
- EBITDA positive

Specialty Promotions:

Oncology, Neurology & Radiology

Targeted specialty promotion campaigns were designed to position Paras Hospitals as the destination of choice for complex, life-changing medical interventions – from cancer care to precision diagnostics.

Paras Hospitals, Panchkula
Leads your **FIGHT AGAINST CANCER & BEYOND**

• Organ-Specific Protocols • Advanced Technology • Evidence-based clinical expertise

Namaste cancer warriors! Let's remove the fear from "Cancer" and put back "Can". Because we think you can fight back and win. We at Paras Cancer Centre, bring a comprehensive approach to cancer care, armed with innovative technology and an outstanding team of oncologists under one roof.

HIGHLIGHTS OF PARAS CANCER CENTRE, PANCHKULA

- Successfully treated 5000+ patients in the last 3 years
- Comprehensive surgical, medical and radiation oncology services
- Evidence-based organ-specific protocols with Tumour Board
- Highly qualified oncology team of doctors with 100+ years' experience
- In-house histopathology and frozen section facility, with prompt biopsy results

MEDICAL ONCOLOGY

- Targeted chemotherapy, precision chemotherapy, immunotherapy, biological therapy, monoclonal antibodies
- Advanced daycare facilities

SURGICAL ONCOLOGY

- Modular OTs with cutting-edge OT equipment for advanced surgeries
- Complex onco-surgeries: reconstructive, conservative and palliative surgeries
- Limb salvage surgery for bone cancers

RADIATION ONCOLOGY

- High-precision LINAC with on-board CT scan
- CT guided highly targeted Arc Radiotherapy (VMAT), IGRT, IMRT, 3D-CRT
- All radiation assisted palliative therapy

NUCLEAR MEDICINE

- Targeted Radioligand based therapies for advanced cancers
- PET CT with advanced time of flight technology
- Most advanced Dual-head Gamma Camera

BONE MARROW TRANSPLANTATION

- Stem cell transplantation facility for blood cancers, thalassemia, aplastic anaemia, congenital bone marrow failure syndromes
- Related & unrelated transplants

ELEKTA LINAC: HIGH-PRECISION TARGETED RADIOTHERAPY

- IntellBeam technology for highly accurate radiation therapy
- Protects healthy tissue
- Minimal side-effects
- Faster, better and easier recovery for patients

Establishing the Marketing Function

AIG Hospitals Hyderabad — 1000-Bed Multi-Super-Specialty Hospital

A comprehensive overview of the strategic marketing initiatives conceived, launched, and executed to position AIG Hospitals as a world-class centre of clinical excellence — spanning international collaborations, digital outreach, event management, and brand building across Hyderabad and beyond.

Launch Event: Mayo Clinic Collaboration

A Landmark Partnership

OCTOBER 2019

AIG Hospitals and Mayo Clinic.
Working together. Working for you.

In October 2019, AIG Hospitals Hyderabad formally announced its collaboration with the Mayo Clinic Care Network — the #1 ranked hospital in the USA. This made AIG the first and only hospital in India to be part of this prestigious global network, bringing world-class diagnostic and clinical expertise directly to patients in India.

AIG Hospitals, Hyderabad and Mayo Clinic, USA Working together. Working for you.

Working together. We believe that's the key to better health care for you and your family. And now the accomplished doctors at AIG Hospitals, Hyderabad – the #1 ranked hospital* in India – and Mayo Clinic – the #1 ranked hospital in the US** – have joined forces. So that you get exactly the care you need, right here at AIG Hospitals.

Dr D Nageshwar Reddy, Chairman, AIG Hospitals and
Dr David Hayes, MD, Medical Director, Mayo Clinic Care Network

Pan-India Advertising Campaign for Mayo Clinic collaboration

To amplify the landmark Mayo Clinic collaboration, a bold, high-impact advertising campaign was rolled out across India. The campaign clearly communicated AIG Hospitals' unique position — the #1 ranked hospital in India, now allied with the #1 ranked hospital in the USA — bringing global healthcare standards to Indian patients.

Campaign Message

"Working together. Working for you." — a powerful tagline underscoring the shared mission of AIG and Mayo Clinic to deliver superior patient outcomes.

Media Reach

Pan-India print, digital, and outdoor advertising targeting both metro and Tier-2 cities, ensuring broad awareness of this unprecedented collaboration.

Key Differentiators Highlighted

World-class clinical teams, access to Mayo Clinic expertise, affordable treatment options, and eConsult services — all available at AIG Hospitals, Hyderabad.

Kudos from Mayo Clinic USA Corporate Team

"Tanjai,

Thank you for sharing. This is so impressive. Thank you so much for your hard work at sharing our story with the people of India who will benefit from our collaboration. You are amazing!"

— **Teresa Watkins, M.B.A.**, Mayo Clinic Care Network

"Hello Tanjai,

We appreciate everything you did to make the announcement a success. You and your team did an outstanding job of tapping your networks — bringing in three separate groups of journalists! Those face-to-face connections were not only important for the announcement, but for future, too. Bravo."

— **Rhoda Fukushima Madson**, Mayo Clinic Public Affairs, International Media Relations

- ✔ These commendations from Mayo Clinic's senior leadership in Rochester, Minnesota reflect the exceptional standard of media outreach and PR management executed for the AIG–Mayo Clinic collaboration announcement, generating significant coverage across national and international platforms.

AIG LIVE: International Endoscopy Conference

AUGUST 2019 · HICC, HITEC CITY, HYDERABAD

AIG LIVE 2019 was a landmark international endoscopy conference held from 29–31 August at the Hyderabad International Convention Centre. The event brought together world-renowned gastroenterologists and endoscopists, covering advanced topics such as Luminal Endoscopy, Advanced Imaging, Advances in Pancreato-Biliary Endoscopy, and GI Bleed management. A satellite symposium was hosted at the AIG Hospitals Auditorium, Gachibowli.

Health Days: Digital Promotions

A series of targeted Health Day campaigns were conceptualised and executed across digital platforms to drive patient engagement, raise awareness about key medical conditions, and position AIG Hospitals' specialist departments prominently in the public consciousness. Each campaign was crafted with bespoke creatives, timed to national and international health observance days.

Timely & Topical

Campaigns aligned with national and global health observance days for maximum relevance and organic reach.

Multi-Platform Outreach

Content distributed across Facebook, Instagram, and Google — using a blend of organic posts and targeted paid promotions.

Specialist Spotlights

Each campaign featured AIG's specialist physicians, reinforcing clinical credibility and encouraging appointment bookings.

New Microsite & Digital Promotion: Centre of Obesity

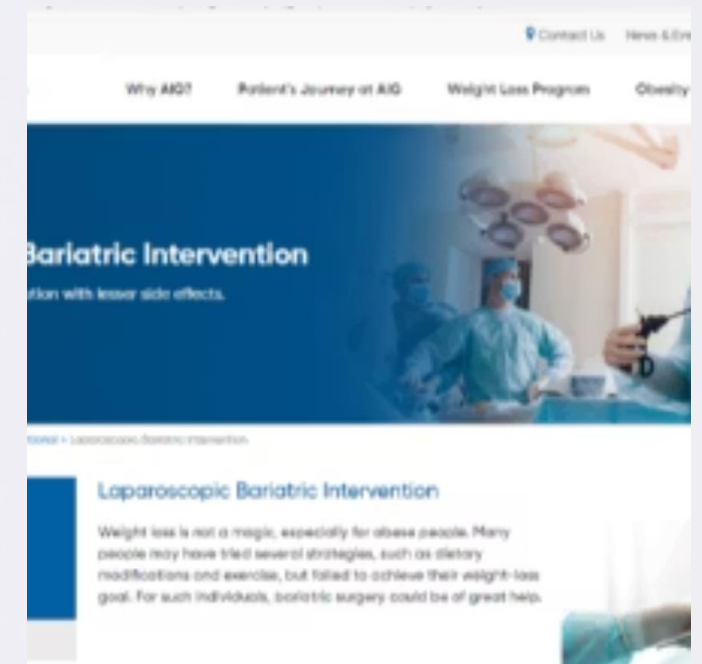

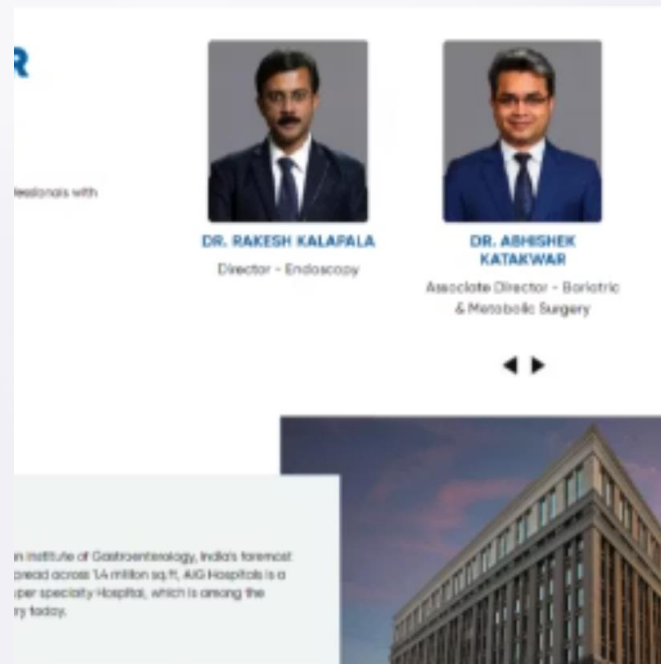

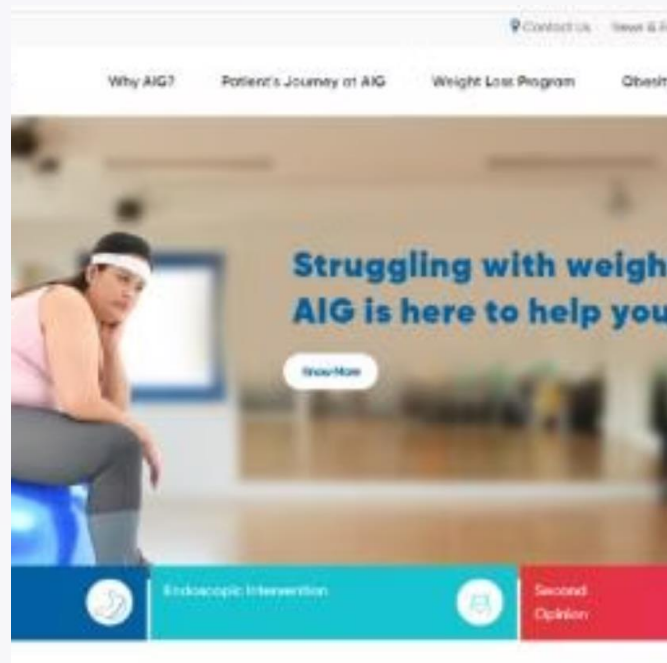

A dedicated microsite was conceptualised and launched for the AIG Centre of Obesity and Metabolic Sciences — one of the most advanced bariatric and metabolic surgery programmes in South India. The microsite served as a comprehensive patient resource, integrating SEO-optimised content, patient testimonials, specialist profiles, and a seamless appointment booking pathway.

Microsite Highlights

- Purpose-built landing page at aighospitals.com/CentreofObesity&MetabolicSciences
- Detailed information on bariatric surgery procedures, eligibility, and outcomes
- Digital advertising campaigns driving targeted traffic to the microsite
- Integrated lead generation and appointment booking

Impact

The microsite and associated digital campaigns significantly improved online discoverability for obesity-related searches in Hyderabad and Telangana, positioning AIG as the premier destination for metabolic care in the region. Social media creatives further amplified reach across target demographics.

AIG Facebook Live Webinars

Pioneering the use of social media for medical education, AIG Hospitals launched a series of Facebook Live webinars and Cardiology CME (Continuing Medical Education) sessions, bringing expert knowledge directly to patients, caregivers, and the medical community — in real time. These sessions featured distinguished guests including TPMC Chairman Satyanarayan Mathala and T-HUB Director Srinivas Taluka, underscoring AIG's connections beyond clinical care into the innovation ecosystem.

Major Event Sponsorships

AIG Hospitals strategically invested in high-visibility event sponsorships to build brand equity among key audience segments — from the corporate community and wellness enthusiasts to the broader public. These sponsorships positioned AIG not merely as a hospital, but as a health and wellness partner embedded in the life of the city.

Brand Visibility

Premium logo placement and AIG branding at high-footfall events across Hyderabad, ensuring consistent top-of-mind recall.

Community Engagement

Sponsorships enabled direct engagement with the public, corporates, and health-conscious communities — beyond the hospital's four walls.

Health Advocacy

Each event presented an opportunity to promote preventive care messaging, health screenings, and specialist consultations.

25th Anniversary Celebration with Sachin Tendulkar

AIG Hospitals marked a momentous milestone — its 25th Anniversary — with a high-profile celebration featuring cricket icon and national legend **Sachin Tendulkar**. This landmark event was a powerful statement of AIG's stature as one of India's foremost healthcare institutions, blending institutional pride with mass public appeal.

Strategic Brand Impact

The association with Sachin Tendulkar — one of the most trusted and beloved personalities in India — elevated AIG's brand recognition nationwide, generating extensive media coverage and social media buzz far beyond Hyderabad.

Marketing Outcomes

- Extensive print, television, and digital media coverage across national outlets
- Significant social media amplification and organic reach
- Reinforced AIG's positioning as a hospital of national repute and patient trust
- A memorable milestone cementing 25 years of healthcare excellence

Mass exodus: 27 docs from Care join AIG

Amrita.Didyala@timesgroup.com

Hyderabad: In a massive exodus, a team of 27 doctors led by one of Hyderabad's top cardiologist Dr B Soma Raju have quit Care Hospitals to join Asian Institute of Gastroenterology (AIG) in the city. The shift, doctors said, took place about two weeks ago attributing it to AIG's efforts at branching out into other specialties. The Institute has been primarily known as a gastroenterology hospital until now.

"Dr Soma Raju along with his team has joined the existing cardiology team led by Dr R Prasad Reddy at AIG. With this development, we would be able to

provide holistic and affordable cardiac care to our patients thanks to the rich expertise and medical knowledge of this accomplished team," said Dr D Nageshwar Reddy, chairman, AIG Hospitals, adding that apart from being a clinician Dr Soma Raju has an unwavering commitment to academics and research.

"We will utilise his experience and knowledge to undertake cutting-edge research to develop newer technologies in our crusade against heart disease. AIG Hospitals supports this talented team with state-of-the-art cardiac facilities," he added.

► Differences led to move: P5

Differences led to the move: Dr Raju

► From P 1

Other members of the team include Dr C Narasimhan, Dr D N Kumar, Dr Raghava Raju and Dr Anuj Kapadiya. "The entire cardiology department at AIG has been outsourced to us and will be managed by us from here on. Doctors apart, a large group of support staff too have shifted out of Care," said one of the doctors from the team.

Speaking about the development, Dr Raajiv Singhal, group CEO of Care Hospitals, said that only 30% of the core cardiology team had jumped ship. The remaining 70% has stayed back at Care, he added. Collectively, the entire team of specialist doctors, junior doctors and support staff at Care comprise 300 people.

"In the last 10 days, we have had four cardiologists join us while four more are scheduled to join over the next two weeks. In fact, we are get-

ting calls from cardiologists across the city who did not want to work with Dr Soma Raju but are now keen on joining us. The business and the revenue hasn't been impacted and not a single appointment has been cancelled since his exit," Dr Singhal said.

Dr Soma Raju, however, claimed it was professional differences that led to the move. "The investors model of medicine has a different philosophy and some of us professionals have our own philosophy on how to practice. We had some differences and decided to part without any bitterness. We also felt that in some areas of medicine in the last 30 to 40 years we have succeeded but in some other we failed and in that path we thought we should look for the right type of partners. I feel professionalism, art and science of medicine, patient care, medical research are areas in which we can succeed in but couldn't do earlier," he said.

DECCAN Chronicle Dr Soma Raju shifts to AIG

Care Hospitals shores up its strength

KANIZA GARARI | DC
HYDERABAD, NOV. 7

The buzz in super speciality hospitals in the city is about the shifting of senior cardiologist Dr Soma Raju from Care Hospitals to the Asian Institute of Gastroenterology at Gachibowli and how this will affect Care which was seen very much as his baby. Dr Raju, a well-known cardiologist sees about 40 out-patients daily, apart from his surgical cases.

He has built a tremendous reputation for himself and there are patients who only want to be treated by him. Should these patients move to the Asian Institute of Gastroenterology along with him, it will entail a revenue loss to Care Hospital estimated at ₹2 crore per month.

The 800-bed AIG is going to have a cardiology unit. Work is apace to make it a hospital with all the major super specialties.

The shift of Dr Raju will strengthen emergency cardiac care in the unit as there are no government hospitals

Dr Soma Raju

in the vicinity of AIG. Dr Raju worked for a decade with the Nizam's Institute of Medical Sciences and was the head of its cardiology unit and dean. He moved to Medcity Hospital and then started Care Hospital at Nampally in 1995. During the last five years, Care Hospital has been expanding and different groups took stakes in the company. It is learnt that Dr Raju has given up his entire stake and is moving out.

The final deal was for ₹1,800 crore. Dr Soma Raju worked till October 22 with Care Hospital.

Dr Raajiv Singhal, Care Hospital's chief executive officer, explained, "There are many seniors in the

cardiology team as only some have gone with Dr Raju. Eight cardiologists will join us. We are very frank with the patients and tell them that Dr Soma Raju is not working with us anymore. There has been any incidence of the patient going away from AIG. Hospital Gachibowli has put a list of 22 cardiologists who have joined the hospital along with Dr Raju. The team has been at the forefront of innovative and complex cardiac services having a total of over 1,000 angiograms and 25,000 angioplasties between them. More than 10,000 device implantations have been done by renowned electrophysiology Dr Narasimhan.

Dr D. Nageshwar Reddy, chairman, AIG Hospitals, said, "Apart from being a great clinician, Dr Soma Raju has an unwavering commitment to academics and research. We will utilise his experience and knowledge to undertake cutting-edge research to develop newer technologies in our crusade against heart disease.

AIG Hospitals has announced that a team of 27 doctors led by one of Hyderabad's top cardiologist Dr B Soma Raju have quit Care Hospitals to join Asian Institute of Gastroenterology (AIG) in the city. The shift, doctors said, took place about two weeks ago attributing it to AIG's efforts at branching out into other specialties. The Institute has been primarily known as a gastroenterology hospital until now.

We would be able to provide holistic and affordable cardiac care to our patients, thanks to the rich expertise and medical knowledge of this accomplished team. Dr. Soma Raju, in a release, said Dr. Nageshwar Reddy created one of the best hospitals in the world and they would work to provide patients with multi-disciplinary integrated care for superior clinical outcomes and an enhanced patient experience.

Senior team of cardiologists joins AIG Hospitals

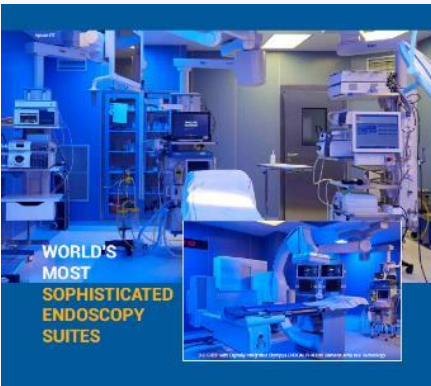

SPECIAL CORRESPONDENT
HYDERABAD

AIG Hospitals, Gachibowli, has announced that a senior team of experienced cardiologists, led by B. Soma Raju, has joined the hospital.

D. Nageshwar Reddy, chairman of AIG Hospitals, welcomed Dr. Soma Raju and his team and said the AIG Hospitals would be able to provide holistic and affordable cardiac care to its patients, thanks to the rich expertise and medical knowledge of this accomplished team. Dr. Soma Raju, in a release, said Dr. Nageshwar Reddy created one of the best hospitals in the world and they would work to provide patients with multi-disciplinary integrated care for superior clinical outcomes and an enhanced patient experience.

Corporate Book: Brand Identity & Institutional Storytelling

A premium-quality corporate book was developed to communicate AIG Hospitals' clinical depth, physician expertise, and institutional vision to key stakeholders — including corporates, insurance partners, referring physicians, and senior patients. This collateral reinforces credibility in face-to-face engagements and business development conversations.

Clinical Credibility

Showcases depth of specialties, physician profiles, and landmark case outcomes to establish trust

Business Development

Used in corporate health tie-ups, insurance negotiations, and referring doctor outreach programs

Brand Consistency

Unified visual identity and messaging across print and digital — ensuring a professional, premium brand impression

Outstanding Results. Delivered.

JUNE 2019 → MARCH 2020

Across every key performance indicator, AIG Hospitals demonstrated extraordinary growth in under one year — doubling revenue, tripling outpatient volumes, and exceeding full-capacity occupancy. These outcomes reflect the direct impact of integrated digital marketing, physician acquisition, and operational excellence.

₹355M

Monthly Revenue (Mar 2020)

Up from ₹190M in June 2019 — **+87% growth**

23,000

OP Volume per month

Up from 11,000 — **+109% increase**

1,600

IP Volume per month

Up from 900 — **+78% growth**

320

Occupancy

Up from 140 — **+128% increase**

Bottom line: A comprehensive digital marketing strategy — combining paid lead generation (25x ROI), organic content, YouTube, Facebook, and earned PR — drove transformational results across revenue, volume, and occupancy within a single fiscal year.

Trauma center and bike ambulance launch – 1st in Odisha

AMRI opens advanced trauma centre

PNS BHUBANESWAR

The AMRI Hospitals Bhubaneswar announced the launching of the first-of-its-kind advanced trauma centre in its premises here on Tuesday.

The announcement of the launch was made at a special programme in the presence of DGP Dr Rajendra Prasad Sharma, Police Commissioner Satyajit Mohanty, Amri Hospitals PV and unit head CLN Reddy, AVP (Medical Administration) Dr Chirantan Bose and and Dr Sajid Noman.

Road traffic accidents have become a 'modern day epidemic' in the country. India accounts for one-fifth of global deaths due to road accidents. In Odisha alone, there were more than 4,463 deaths in

2016 which was an alarming three per cent increase over the previous year.

"Keeping in view the growing number of trauma victims and its long lasting consequences on the victim, family, community and the State as a whole, the AMRI Hospital Bhubaneswar launched its own Advanced Trauma Centre to

provide multi-specialty approach to trauma victims and fight towards decreasing the rate of mortality and disability of the victims," said Reddy.

There would be a direct hotline number (0674-6666666) for round-the-clock functional of the emergency department, he said.

TUMOR IN BRAIN? DR RN BHATTACHARYA FROM AMRI HOSPITAL DHAKURIA EXPLAINS

DOCTORS SPEAK, HEALTHCARE | JANUARY 16, 2019 | BY NEHA NARDA

Facebook | Twitter | YouTube | Instagram

The brain controls the operations of the whole body. And, whenever a tumor or cancer is detected in the brain, the entire human body gets affected. Although many in India might not be aware much of what a brain tumor is, knowing about it could always be helpful for us as well as for our dear ones. To understand brain tumor better, Dr. RN Bhattacharya, Director, Neurosciences, AMRI Hospital Dhakuria, best neurology hospital in Kolkata, explains it in simple terms for our readers.

1. What is brain tumor, and how does it affect one's life?

Our body is built with millions of cells, and each individual cell in our body has a specific function to perform. The cells continuously divide and develop. However, sometimes they develop in an abnormal manner, and produce abnormal cells. These cells then affect the normal cells and harm their regular functioning. The collection of these cells result in tumor, which in the case of the brain, is a brain tumor.

AMRI HOSPITAL INTRODUCES ARTIFICIAL VALVE FOR CARDIAC VALVE IMPLANTATION IN EASTERN INDIA

Published on: January 15, 2019

Marking its year of many achievements in 2018, AMRI Hospitals, the leading private healthcare group, established yet another landmark by introducing an indigenous artificial valve for cardiac valve implantation, for the first time in Eastern India. Manufactured completely in India, the valve is not just cost effective but also meets global standards.

Over the years, AMRI Hospital, the best heart hospital in Kolkata has undertaken robust measures to widen the horizons of the country's healthcare sector. It is always on the lookout for innovations in the field of medicine.

The cardiac implant surgery was conducted on a 73-year old patient, Subhraj Chandra Dutta, who is a resident of Chittagong in Bangladesh. It was conducted on December 26, 2018 by Dr. RN Maitra, one of the leading cardiac surgeons at AMRI Hospital Dhakuria.

"Dr. Dutta had fallen down on the street around 4-5 months ago after losing consciousness. When he underwent tests, he was diagnosed with severe aortic stenosis," Dr. Maitra said.

APOLLO CANCER INSTITUTES

THE A-TEAM, REDEFINING CANCER CARE IN MUMBAI

Organ-specific protocols | Innovative technology | Outstanding clinical expertise

Namaste Mumbai! It is time to remove the fear from "Cancer" and put back "Can". Because we think you can. Fight back. And win. We at Apollo Cancer Institutes, now bring a comprehensive approach to cancer care with organ-specific protocols, to lead you through this difficult journey with renewed hope and confidence. Armed with innovative technology and an outstanding range of clinical expertise under one roof, we are ready to deliver the best medical outcomes and redefine cancer care in this region.

INTEGRATED CARE
A multi-disciplinary integrated team approach combines surgical, medical and radiation treatment for comprehensive cancer care. All investigations - blood tests, PET-CT and advanced nuclear medicine - will be done seamlessly under one roof.

ADVANCED STEREOTACTIC RADIOSURGERY
The innovative TrueBeam STx is a high-precision fully integrated system for image-guided radiotherapy and radiosurgery. It can treat cancer anywhere in the body and enables radiosurgery treatment in 2 to 5 days.

TrueBeam™ STx
Features: 3D-CRT, Dynamic conformal arc, Rapid Arc radiotherapy, FFF Stereotactic Radiosurgery (SRS), and Hypofractionated advanced Stereotactic Body Radiation Therapy (SBRT).

PERSONALIZED TREATMENT
Every patient is unique and is affected by disease in a different way. At Apollo Cancer Institutes, we match the genome of the cancer for tailor-made treatment. This leads to fewer side effects and a better quality of life.

ORGAN-SPECIFIC PROTOCOLS
Each organ responds differently to cancer treatment and requires specialized protocols. Our expert team has vast experience in organ-specific treatment and discusses all cases in a multi-function Tumour board to ensure the best treatment option for every patient.

diagnosis, prognosis of cancer and clinical outcomes."

TrueBeamSTx, which helps in faster treatment and accurately

precision and simplicity to accurately target tumors of the brain, spine, lung and other areas that are typical

Prof Shyam K Sarin, Consultant, Radiation Oncology, said, "With advancements in technology, we are able to deliver better clinical outcomes and quality of life for cancer patients. Precise radiation can be delivered through

target tumors in brain, spine, lung and other areas, which are difficult to treat surgically."

TrueBeam STx system offers doctors a non-invasive alternative to traditional surgery. This system is the fastest in treatment speed,

by difficult to treat surgically. This leads to shorter treatment times for patients with fewer complications and side effects. Radiosurgery using TrueBeamSTx may be an option for patients who are not eligible for traditional surgery.

Apollo Hospital launches advanced Apollo Cancer Institutes

By Chandrasekhar Menon

NAI MUMBAI Apollo Hospitals, in Navi Mumbai, has launched its advanced Apollo Cancer Institutes on 3rd February which is also observed as World Cancer Day.

Apollo Cancer Institutes have pioneered several game-changing developments and have set benchmarks in clinical and service excellence in cancer care with their cutting-edge medical technology, stringent quality protocols creating a hallmark of the cancer programme.

"With this cutting-edge technology and with special attention to Radiosurgery programmes which can be performed with the machinery we have procured, we aim to become a center of excellence and redefine cancer care in relation to Radiation

- State-of-the-art diagnosis
- Highly qualified oncology team with international exposure and advanced training
- Advanced Stereotactic Radiosurgery delivered through the latest model of Varian's innovative TrueBeamSTx
- Personalized Treatment
- Organ specific pathology and radiology department
- Multi-disciplinary Integrated team approach
- Organ-specific Tumor Board
- Largest network of oncologists
- Organ-specific approach to cancer care
- One of the largest clinical teams with vast experience
- Most advanced radiosurgery system reducing treatment duration to 2-3 days

therapy in the country," said Dr Sandeep De, Consultant, Radiation Oncology, while addressing the media.

Prof Shashir Shetty, Senior Surgical consultant and Head - Oncology services, Apollo Hospitals, Navi Mumbai, said, "Management of cancer has evolved over the recent past with emphasis on organ preservation. Developments have

paralleled technological advancements as well as refinement in the surgical technique. Large number of organ preservation surgeries are performed today as quality of life is as important as survival. Also, currently we have better screening modalities, where we can diagnose the disease in early stages. Recast conservation surgeries will improve the quality of life and

social well-being."

Surgical Oncology services at Apollo include Organ Preservation Surgeries, Minimal Invasive Surgeries, and surgery for various organ tumors such as the breast, GI tract, head & neck, brain, liver.

Medical Oncology services at Apollo include Chemotherapy, Immunotherapy, Biological therapy, Targeted drug therapy and Hormone therapy.

The hospital is also planning a Bone Marrow Transplantation unit soon. Dr Tejinder Singh, Consultant, Medical Oncology, said, "Targeted and Genomic therapies have revolutionized cancer care. This helps oncologists in clinical decisions and helps patients receive targeted, individualized therapies that will improve

of Hemant Nagrale, Commissioner of Police, Navi Mumbai and Dr Thomas Burke, Emergency Medicine Specialist, Harvard University, USA.

The Emergency Response System is initiated with the number '1066', which is answered by trained emergency personnel who would advise and dispatch GPS-enabled ambulance. The ambulance, among the most advanced in the Mumbai, has trained paramedics with all essential equipment and drugs entered to deliver care at the bedside or on the road.

Speaking during the inauguration program, Mr. Nagrale, said, "I'm happy to inaugurate the Advanced Emergency Care Centre. This will help the emergency and critical care patients of Navi Mumbai, and will get treatment within the 'Golden Hour.' Also, we are happy to be

Safety Week 2017 initiative and have been imparting safety and first aid training with their support."

Dr Thomas Burke, Emergency Medicine Specialist, Harvard University, USA, speaking at the launch said, "Emergency medicine has evolved over the years with new benchmarks. It is important for healthcare centers to adopt the international clinical protocols, as it helps saving time and life in critical moments."

Dr Nitin Jagasia, Head, Emergency Medical Services, said, "There is a 2-way communication between the ambulance and the hospital to ensure specific areas such as cath lab, operating theatre, ICU's are prepared to receive the patient. The GPS enabled tracking provides the team at Apollo an accurate estimate of patient arrival. The Apollo emergency response

(L-R) Apollo CEO, Dr N Trivedi, Harvard Emergency Med Specialist, Dr Thomas Burke, Apollo Emergency Med Services, Dr Nitin Jagasia & Commissioner

emergency cases have been stabilized in a time critical manner at par with the international benchmark for golden hour management."

The Stroke a multi-disciplinary clinic where all patients see neurologists, neurosurgeons, physiotherapists, speech therapists formulate a comprehensive treatment plan for each patient.

Mr. Ramesh Chandra, Chairman, arrived

via ambulance. Apollo Hospitals, Mumbai immediately identified left sided stroke, arranged for basic blood tests and a CT Angiogram which was com

suffers from a brain stroke every three seconds in India. Following the onset of blockage of blood supply to the brain, over 1.4 million nerve cells are ir

ing CT scan of the brain and arranging to start the treatment in a new benchmark, setting time of 42 minutes. The patient received the clot busting drug which worked to open up the blocked artery and restore blood flow in the brain. Within 5 hours he had fully recovered from the paralysis and regained his ability to speak and move normally."

Dr. Narendra Trivedi, CEO, Apollo Hospitals, Navi Mumbai, said "Apollo Hospitals has always been monitoring its service delivery against international benchmarks, which demonstrates quality of our care. This does not mean

Participation of Mumbai Police Commissioner Hemant Nagrale and actor Boman Irani.

▶ Emergency Services Campaign

Focused campaigns to promote emergency care services.

I am back with my family. Because someone called 1066

A stroke occurs when the brain doesn't receive enough oxygen or blood. Sometimes, this is due to a clot blocking the blood vessels in the brain. And it can lead to a temporary or even permanent loss of brain functions. If it takes more than three hours for a person suffering from a stroke to be treated the effects can be irreversible. So at the first signs of a stroke, call for a fully equipped ambulance with a team of trained paramedics. Diagnosis and preliminary treatment starts immediately at your doorstep when you call 1066 for an Apollo Ambulance.

APOLLO GOLDEN HOUR EMERGENCY MANAGEMENT PROTOCOL

					
0 min Patient arrives at Apollo Emergency	<10 min Patient Evaluation by Emergency Medicine Physician	<15 min Examination by team of appropriate Specialists	<25 min Clinical Investigations & Scans Completed	<35 min Evaluation of Clinical Reports	<45 min Patient Stabilised

ADVANTAGES OF APOLLO EMERGENCY CARE

• 33 years of experience in emergency care • Door to triage in less than 5 minutes • Multi-Specialty Emergency & Trauma Care Centre • Highly experienced emergency medicine specialists	• Team of Super Specialists all under one roof • 1066 – Dedicated emergency number • Advanced ambulatory services, with trained paramedics • Capable of handling both adult and paediatric emergencies

3 am: Apollo ICU Mission Critical: Accomplished

Reema (name changed) developed life threatening complications after a Caesarean surgery at a private hospital. On arrival at Apollo Hospitals, Navi Mumbai, her condition was critical, with massive blood loss, low BP, low haemoglobin count and acute kidney failure. Apollo team of intensivists and specialists started treatment according to the Apollo Critical Care protocol. Without losing any time, an emergency surgery was

conducted at 3 am with massive blood transfusion. Acute kidney failure was managed with continuous renal replacement therapy (CRRT) with hemodynamics monitoring. This life-saving outcome was only possible because of the integrated team approach and the 24/7 availability of highly experienced Apollo specialists. Reema successfully recovered and went back home to her new-born baby.

Advanced Critical Care at Apollo ICU

- Ultra-modern ICU & Transplant ICU facilities
- Highly qualified specialists with international experience and training
- 24/7 availability of Critical Care specialists and skilled nurses
- Integrated multi-disciplinary team from various departments
- Palliative Care
- World-class technology

Apollo Hospital begins brain stroke treatment in record 42 minutes

Amit Srivastava
amit.srivastava@dnaindia.net

Mumbai: Apollo Hospitals, Navi Mumbai, set a benchmark by starting treatment of acute brain stroke patient in just 42 minutes a few days ago. It surpassed the international quality standard, which is 60 minutes. The hospital says that it was possible due to the stringent Stroke Protocol Code that is followed by them.

Dr Narendra Trivedi, CEO, Apollo Hospital, said, "The doctors at the hospital thrombolysed the patient with ischemic arterial stroke of the brain in just 42 minutes, creating a world record. The hospital set a new benchmark of starting treatment of brain stroke patient in such a short time."

Thrombolysis is a process under which brain stroke patients are administered tissue plasminogen activator (TPA) to dissolve arterial blood clots.

The patient, 54-year-old Ravikant (name changed), from Navi Mumbai went to the hospital on December 17, 2016, with complete paralysis of the left upper and lower limbs and inability to speak.

The doctors diagnosed him as having complete thrombotic occlusion of Right ICA and distal MI with subcortical infarction. In simple words, there was complete blockage of the arteries supplying blood to the right side of the brain due to a large clot obstructing blood flow.

Dr Girish Nair, Consultant, Neurology, Apollo Hospitals, said, "When the patient was brought in the hospital, he was unable to speak, walk or move his head. However, with proper preparation and treatment, the patient had become comfortable in just four hours."

Nair added, "A person suffers from a brain stroke every three seconds in India and a death is reported every three minutes. Fol-

BRAIN ATTACK

Stroke can happen to anyone at any time. It occurs when blood flow to an area of brain is cut off.

When this happens, brain cells are deprived of oxygen and begin to die. When brain cells die during a stroke, abilities controlled by that area of the brain such as memory and muscle control are lost.

lowing the onset of blockage of blood supply to the brain, over 1.4 million nerve cells are irreversibly damaged every second."

He further said that the emergency room team did a stellar job of triaging the patient, completing the critical tests including CT scan of the brain and arranging to start the treatment in a new benchmark setting time of 42 minutes. "The patient was administered the clot busting drug which worked to open up the blocked artery and restore blood flow in the brain. Within 5 hour he had fully recovered from the paralysis and regained his ability to speak and move normally," said Dr Nair.

Senior gets 2nd chance with hi-tech pacemaker

'Newer 2Gm Model Is Safer, Long Lasting'

Indira.Rodericks
@timesgroup.com

Eighty-five year old Akrur Rane, a national badminton player from Nepal, was visiting family in Navi Mumbai when he experienced sudden weakness in the right side of his body. His family was alarmed and rushed him to hospital.

An otherwise fit and healthy Rane was unsure of what was happening at first, only to be told that he had suffered a stroke, for which he was treated by a neurologist, after which he recovered.

However, on evaluation, his ECG showed rhythm abnormalities, for which he was referred to Dr Rahul Gupta, consulting cardiologist at Apollo Hospital.

The doctors conducted a further detailed evaluation by continuously monitoring Rane's ECG, which showed that his heart rate would suddenly become as low as 25 beats per minute and it would turn irregular at other times.

"We diagnosed Rane with sick sinus syndrome (a disease where the heart rate drops down suddenly, leading to loss of consciousness) with AV no-

SMALL BUT EFFECTIVE

> A 2 gm leadless pacemaker was implanted inside Akrur Rane's heart to treat his sick sinus syndrome (where the heart rate suddenly drops, causing loss of consciousness) and AV nodal disease

> The new pacemaker is quick, safe, without cuts or wires and lasts for more than 12 years

> The pacemaker sends

electrical pulses when the heart is beating too slowly and adjusts the heart rate

> Unlike most pacemakers, which are placed in patient's chest with leads running to the heart, leadless pacemaker was implanted inside Rane's heart

"I was unable to even lift my left hand and had dizzy spells, but now I feel fitter than ever

Akrur Rane | RECIPIENT

dal disease. The patient needed a pacemaker," said Dr Gupta.

He added that after discussions with Rane's family, the doctors decided to implant the smallest and most advanced leadless pacemaker.

Weighing a mere 2 grams, this new pacemaker offered the advantage of quickness, safety, no cuts, no wires and would last for more than 12 years. And, most importantly, it ensures the patient's comfort. "Unlike most pacemakers, which are placed in the patient's chest with leads running to the heart, this one is implanted directly into the patient's heart," Dr Gupta said.

He explained that the pacemaker can send electrical pulses when the heart is beating

too slowly and adjust heart rate based on physical activity levels.

The leadless pacemaker does not require any pacing leads. A traditional pacemaker would require a lead to be inserted into your heart from the pacemaker in your chest. But the new one is less invasive, self-contained and smaller than the conventional ones. It also eliminates scarring or a bulge on the chest.

Rane has now resumed his regular activity after the surgery with no complications. Delighted to be the first recipient of this technology in the state, he said, "I was unable to even lift my left hand and had dizzy spells, but now I feel fitter."

In a first, city sends heart to Chennai for Lebanese man

Nerul Man's 12-Yr-Old Son, Wife Give Nod

Times News Network

Mumbai: The city donned a giver's role on Wednesday as it sent a cadaver heart to Chennai to save the life of a Lebanese man battling end-stage organ failure. The country's growing organ-sharing network has immensely benefited the city as well, facilitating nearly half of the 73 heart transplants carried out in the last two years.

The donor was a Khopoli resident who was admitted to Apollo Hospital in Nerul on September 29 with a history of bleed in the brain stem. Chetan Tailor (43), who made a living from a tiny shop and ran a family of three, didn't show improvement and was subsequently declared brain dead early on Wednesday. His wife and 12-year-old son gave the consent to donate his organs.

When the Zonal Transplant Coordination Committee (ZTOC) that oversees the distribution of cadaver organs was informed about the availability of a heart, they found that there was no suitable recipient in the city. The National Organ and Tissue Transplant Organisation (NOTTO) that facilitates inter-state sharing of organs in the country then found a match at Fortis Malar Hospital, Chennai. The

4 HOURS VIA GREEN CORRIDOR

> A cadaver heart was sent to Chennai to save the life of a Lebanese man with end-stage organ failure

> The donor, Khopoli resident Chetan Tailor (43), was declared brain dead late on Wednesday

> The 61-year-old recipient had been wait-listed for a month

After he was declared brain dead, we counselled the family members and with all generosity they agreed to donate his organs

Dr Prasad Mugalikar | MEDICAL DIRECTOR, APOLLO HOSPITALS

65-year-old recipient from Lebanon, father of three children, was suffering from cardiomyopathy and had been wait-listed for a month.

The decision to send the organ set off a chain of events that was co-ordinated by the ZTOC. A green corridor was created by the police that helped the recipient hospital to retrieve the organ from Apollo and reach the domestic airport in Vile Park, a distance of 35 km, all within 40 minutes. The organ reached Chennai airport at 4.05 pm.

The organ was transferred from Chennai Airport to Fortis Malar Hospital in 26 minutes covering a distance of 12 km. The organ-sharing between two metros took around four hours.

Dr Prasad Mugalikar, me-

dical director of Apollo Hospitals, said that Tailor's heart was the only organ that could be retrieved for a transplant. "After he was declared brain dead, we counselled the family members and with all generosity they agreed to donate his organs," he said.

Dr SK Madhur, vice president of ZTOC, said that the national organ sharing network has started bearing fruit. "Mumbai, for instance, has got organs all the way from Chandigarh, Pune, Surat and other cities also have helped the city's heart transplant programme," he said. Experts say that organ-sharing is the best way to minimize wastage in the country where the organ donation rate stands at an abysmal 0.8 persons per million population.

Heart from Navi Mumbai reaches Chennai in 4 hours, saves Lebanese businessman

HT Correspondent
hnmr@hindustantimes.com

MUMBAI: A 61-year-old Lebanese businessman admitted to a Chennai hospital, who was on the waiting list for a heart transplant for the past one month, received the heart harvested from a Navi Mumbai-based grocery store owner who was declared brain-dead on Thursday.

The heart was sent out of Maharashtra in the absence of a suitable recipient in the state, making it the first-ever organ sent out of state for transplant. The entire journey from Mumbai to Chennai was completed in four hours.

Chetan Tailor, 43, was admitted to Apollo Hospital, Navi Mumbai, on September 22 and was diagnosed with bleeding in the brain stem.

Navi Mumbai doctors rush with the heart.

Later, the doctors spoke to the Tailors and requested them to consider the possibility of donating Chetan's organs.

"We counselled the family members after which his wife and kin agreed to donate his organs. After multiple tests, it came to the fore that only the heart was suitable for transplantation," said Dr Prasad Mugalikar, medical

director, Apollo hospital.

When the Zonal Transplant Coordination Committee, which facilitates organ transplants, was informed about the availability of the heart, it came to the fore that no suitable recipient was available in the state.

The organ availability was immediately communicated to the National Organ and Tissue

Transplant Organisation, the registry of organs and tissues donations and transplantations in the country.

The Lebanese national, who has been admitted to Fortis Malar, Chennai, was identified as the suitable recipient for Tailor's heart.

After seeking necessary approvals, officials from Apollo hospital initiated the process to transport the heart to Chennai.

The traffic police from Mumbai and Navi Mumbai created a green corridor between the hospital and the Mumbai airport. They said the 32-km journey started at 12.48 pm and the ambulance reached the airport at 1.28 pm. Doctors said the chartered aircraft landed in Chennai at 4.05 pm and reached the hospital by 4.36 pm, covering a distance of 12 km in 26 minutes.

INTRODUCING

Pinhole Spine Surgery

Global Hospitals, the super specialty in Spinecare and pioneers of Keyhole Spine Surgery, now introduces Pinhole Spine Surgery. The Pinhole technique includes Coblation Nucleoplasty performed on the lower back and neck to correct Disc problems, and Vertebroplasty and Khyphoplasty performed on fractured Vertebrae. Keyhole techniques on the other hand include Spinal Fusion, Complex Spinal Reconstruction and Deformity Correction. What's more, apart from being the 'firsts' to perform these surgeries, Global Hospitals has saved hundreds of victims of failed spine surgeries with the help of these highly advanced, minimally invasive reconstructive procedures.

Advantages of Pinhole Spine Surgery

- ◆ No incision or scars
- ◆ Discharge within 24 hrs
- ◆ Back to normal life in less than 2 days*

*Subject to clinical condition.

Call for Super Speciality Spine Care at: 080087 61000

Achievements: ◆ First Coblation Nucleoplasty through Pinhole Technique ◆ First Nucleus Replacement in spine through key hole surgery in South Asia ◆ First Spinal Cord Stimulation Procedure in South India ◆ First Khyphoplasty in A.P. ◆ Highest number of Kyphosis and Scoliosis Surgeries in A.P. ◆ First Lumbar Disc Replacement in A.P. ◆ First three Level Total Disc Replacement in Cervical Spine ◆ Only Hospital in A.P. to perform 'AxiLIP' pin-hole technique for lower back pain ◆ Minimal invasive procedures for Prolapsed Disc, Spinal Scoliosis & Failed Back Syndrome ◆ Complex Reconstructive Procedures for Failed Spine Surgery, Spinal Tumors, Infection and Scoliosis ◆ 100+ dynamic spinal stabilization procedures

Building awareness and doctor profiling

What is the uniqueness of this model?

Usually cancer centres are run by the government or trusts. But these are found lacking in ensuring sustainability. In most cases, it either becomes overcrowded or individualistic. So, we deliberated with a group of consultants and established this network, which employs local and expatriate models. Basically, it enables various centres to join hands to work towards a common goal and makes cancer care accessible to everyone. We are constantly expanding the network, over 16 centres of excellence and in the next two-and-a-half years, the network will have over 20 centres.

How do you plan to expand the HUG network?
We want to spread their knowledge and expertise of our labs among oncologists. We are open to all interested pathologists across the country; they can join our network and discuss.

What are the special treatment procedures offered?
Apart from the cutting-edge CyberKnife and CT on Rail laser capture/microscope, fluorescence and fluorescence extract-DNA, RNA in tissues and paraffin blocks, beads inspection. We also have a centre for trieta solanes, with oncological research and development.

Could you elaborate about your clinical trials?
We treat about 22,000 patients and are working on offering full-scale services. We have undertaken 4 in the next 4-5 years; it will make in pact on the Indian populace.

FACT FILE
HUG is now the only which has a m in all the companies, except managed by his uses a husband-ness model. It is 400 crore, including debt and its projects. It is various: execution and Callout. Thru (Haka, Silliguri and centres of excellence up in Delhi and Bengal is a 100-bedded alombed.

Painless CyberKnife kills cancer

Seethalakshmi S | TNN

Bangalore: Cruise missile technology will now be used to treat cancer. An artificial intelligence-enabled robot performs the revolutionary CyberKnife treatment, a bloodless and painless surgery. It allows doctors to treat tumours in brain, lungs, liver, prostate and spine without causing any damage to other organs.

The Rs 30-crore CyberKnife arrived in Bangalore from the US last week at the Health Care Global (HCG), a network of cancer care units. Hitherto, cancer patients had to travel to the US for this treatment. HCG is the first Bangalore hospital to procure the CyberKnife. Its computer system not only tells the robot where the tumour is but where it is in relation to the breathing cycle. Simply put, the robot

**CyberKnife
Robotic
Radiosurgery**

- First and only robotic radio-surgery system
- Treats tumours anywhere in body
- Unlike conventional CyberKnife uses skeletal anchors rather than invasive skull pins, to identify
- Cost of treatment is

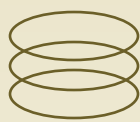

tion. CyberKnife zeros in on the tumour and destroys it. The robot moves through 360 degrees, blocks normal tissues and treats only the tumour," Dr B S Ajai Kumar, radiation oncologist and chairman HCG, told STOI.

CyberKnife uses two cameras and infrared technology with absolutely no human intervention during surgery. The treatment is reduced from 5-6 weeks to a maximum of five days with 45-60 minutes per session.

"Such is its precision that if the robot finds a 2-cm tumour, it will destroy it. If it finds another 3-cm tumour, the robot changes the cone to target the bigger tumour and destroys that too. It's like a surgeon's knife with pinpoint accuracy. The best part is that the patient can return immediately to their routine after the session is over," Dr Kumar explained.

Awareness campaigns and profiling of key doctors such as Dr Adler and Dr Ajaikumar.

Cyber-knife inventor for minimal invasive surgery

Seethalakshmi S | TNN

Bangalore: As the world follows the dying moments of British celebrity Jade Goody, 27, currently locked in a losing battle with cervical cancer, one person is convinced that cancer can be less traumatic. And he should know.

As inventor of Cyber-knife, where-in a robot destroys a tumour in the body without causing any damage to other organs during radiation, Dr John R Adler, the radiation oncologist at Stanford University medical centre swears by minimal invasive surgery. In this exclusive interview to TOI, he said early detection is the key to prevent cancer from becoming a killer disease by 2012.

“When I was studying at Harvard in 1985, I realized how inadequate our surgical procedures were. We were treating the entire body to cure one part. The best way to predict the future is to invent it. So, I began working on invasive computerized tools for surgery,” he said.

INTERVIEW

Cyber-knife is a painless and bloodless procedure which zeroes in on the tumour, blocks normal tissues and targets only the tumour. The radiation effect on the patient is minimal. It’s like the surgeon’s knife with pinpoint accuracy. When I treated the first patient with my invention, I was on top of the world

Dr John R Adler | RADIATION ONCOLOGIST

When I treated the first patient with my invention, I was on top of the world,” Dr Adler said.

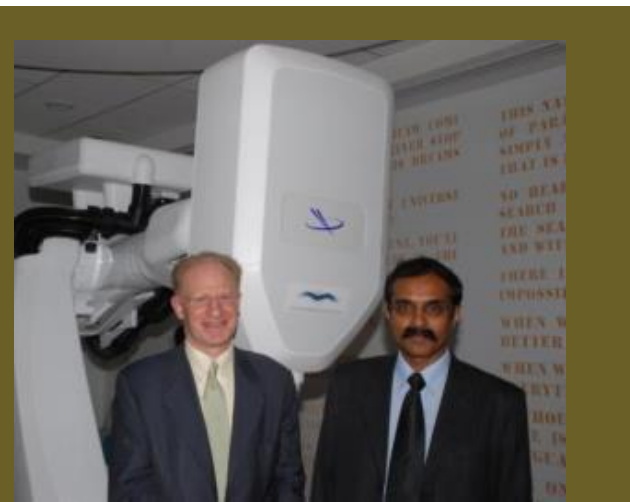

His logic was simple. “If the principle works for the brain, why not other parts of the body? Cyber-knife is ideal for small and early stages of tumours. It was not easy. Before I could try it on a patient, there was a lot of struggle. But, as Gandhi puts it, nothing is achieved without struggle,” said the California-based surgeon. Cyber-knife is the first and only robotic radio-surgery system to treat tumours anywhere in the body. Dr Adler, a pioneer in radiosurgery, holds seven US patents and author of over 150 peer-reviewed publications.

What next for this surgeon? “Developing a tool to regulate a part of an over-reactive brain which results in behavioural disorder,” is his ready reply.

CyberKnife, Which Kills Cancer, Launched; Treatment Costs Rs 2-5 Lakh

Seethalakshmi S | TNN

Bangalore: Lawrence D'Souza, who is diagnosed with brain cancer, is lying still. A robot is moving closer to his brain. When it stops, the doctor treating him, seated outside the room, is on alert. He looks at the monitor before him. The robot zeroes in on the cancerous tumour and destroys it. With absolutely no human intervention, the robot kills all cancerous cells. It moves again to track any other deadly cells around the same area in D'Souza's brain.

CyberKnife, the mind-boggling technology that promises to treat deadly cancers, has come as a miracle for those who gave up hope. The bloodless and painless surgery is performed by a robotic system, using artificial intelligence.

With just two hospitals in the country—Health Care Global (HCG), Bangalore, and Apollo Hospitals in Chennai—procuring the high-end equipment, patients from several parts of the country, who would earlier travel to the US for this treatment, are coming here.

CyberKnife was formally launched by former President A P J Abdul Kalam last week. "It has redefined cancer treatment and enhances lifespan. The trauma, side-effects of chemotherapy and resultant hair loss are reduced. The robot moves 360° on the patient, blocks the normal tissues and treats only the tumour," Dr B S Ajai Kumar, radiation oncologist and chairman, HCG, told TOI. The treatment costs Rs 2-5 lakh, depending on the stage of cancer and the patient's need.

It's robot vs CHEMO

BOUNCING BACK TO LIFE

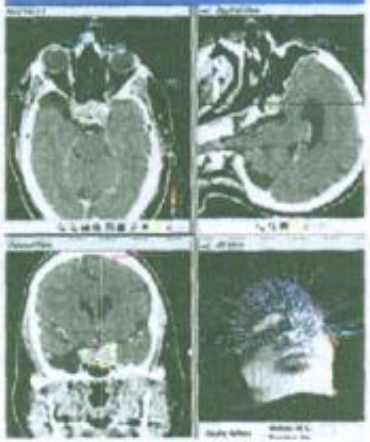

When Priya Choudhary experienced a pain in the abdomen, she dismissed it as routine cramps. A month later, doctors at a well-known Mumbai hospital told her she had a cancerous tumour which could be fatal. "Chemotherapy and radiation followed, but the tumour was stubborn and the cancerous cells began to spread. After five sittings with Cy-

berKnife, I have bounced back," said the mother of two. Nagambika from Mangalore, who is in her 60s and was paralyzed after she was diagnosed with a huge brain tumour, narrates a similar experience. "I came to Bangalore after I heard about this treatment. I was wheelchair-bound when I came in. I am confident of walking back home," she said.

Dr S Bhattacharjee, who treated

PRECISION TREATMENT

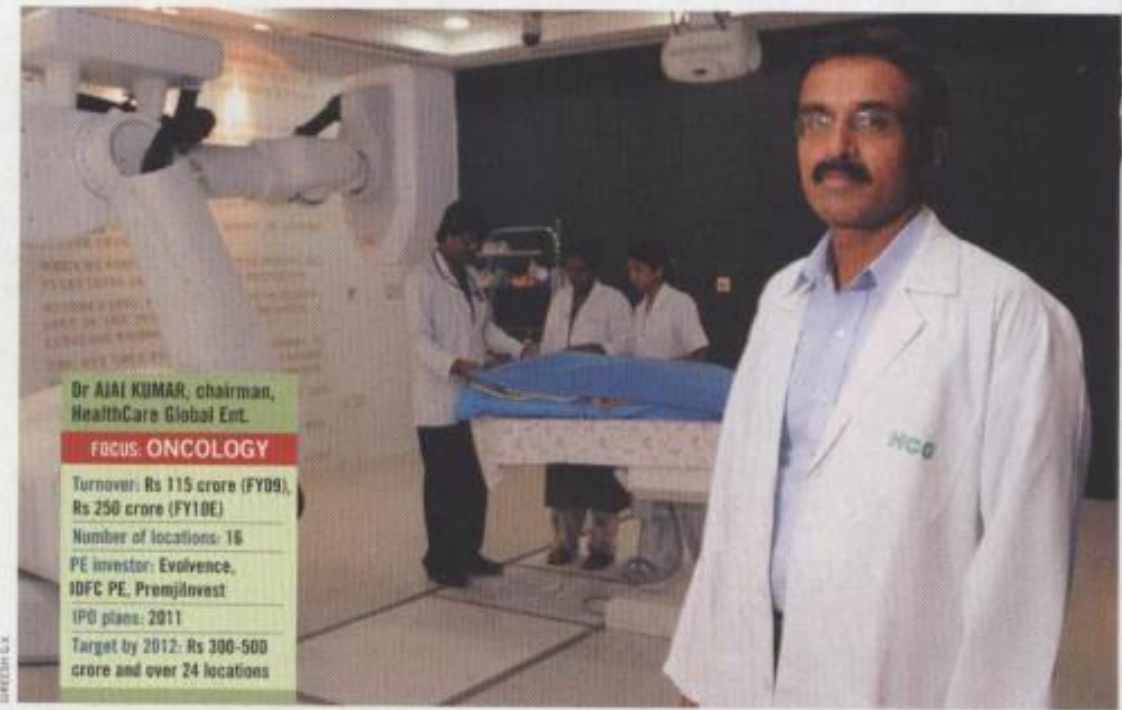

CyberKnife allows doctors to treat tumours in the brain, lungs, liver, prostate and spine, without causing any damage to other organs during radiation. Such is the precision that if the robot finds a 2-cm tumour, it destroys it. If it finds another 3-cm tumour, the robot automatically changes the cone to target the bigger tumour and destroys that too

both Nagambika and Priya, said: "Cancer cells don't die easily. CyberKnife not only kills the cells but also stops further reproduction, which could be fatal."

FOCUS: ONCOLOGY

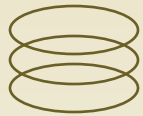

Turnover: Rs 115 crore (FY09), Rs 250 crore (FY10E)
Number of locations: 16
PE investor: Evolvece, IDFC PE, Premidvest
IPO plans: 2011
Target by 2012: Rs 300-500 crore and over 24 locations

FOR long, the story of private healthcare in India has been told through doctor-led nursing homes and clinics, trust-run tertiary care hospitals and corporate multi-specialty hospital (MSH) chains. Now, a small band of specialist healthcare providers — founded not just by doctors but also entrepreneurs, and in one rare case a private equity (PE) fund — is itching to take its place in the sun. They are muscling their way into specialty care, challenging MSHs such as Apollo, Fortis and even smaller ones to agree to new models of cohabitation.

What sets them apart is their focus. Whether it is high-end disciplines such as oncology or neighbourhood specialties such as ophthalmol-

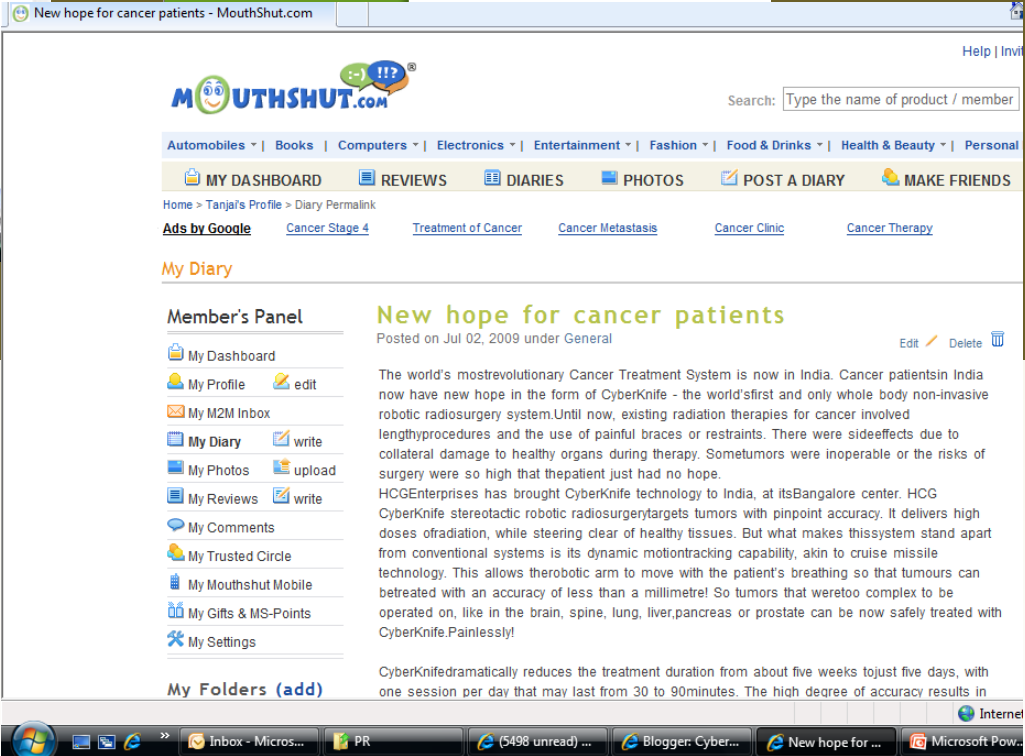

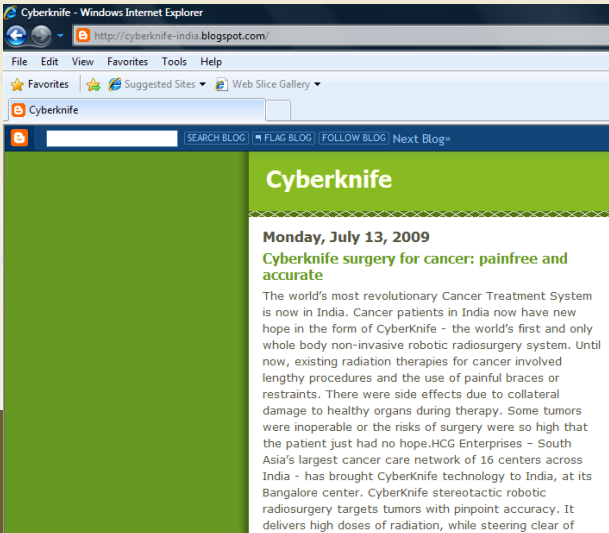

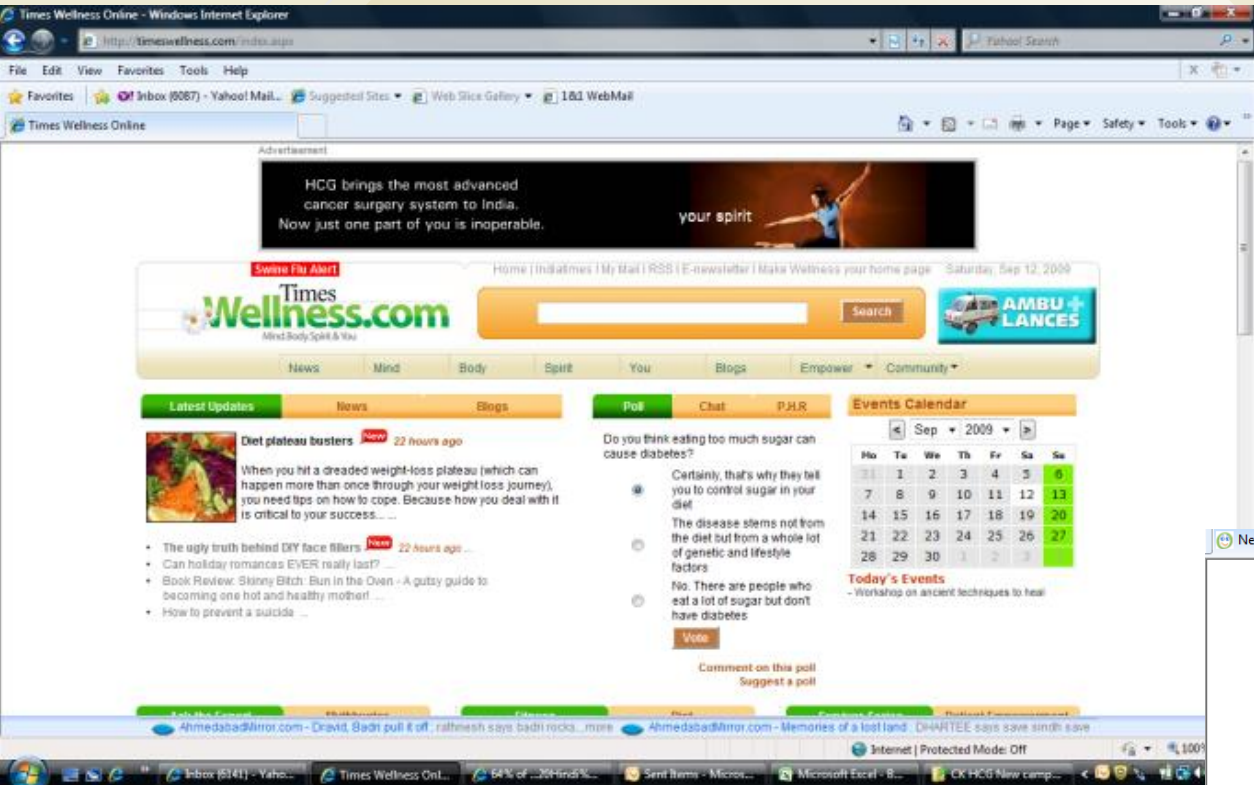

ogy and day-care surgery, they are growing by sticking to their knitting. And while there have always been stand-alone specialty clinics or hospitals run by doctors, these providers want to grow like corporate set-ups into multiple locations, offering the same precision of quality care.

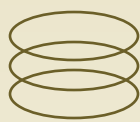

Consider HealthCare Global (HCG), now India's largest network of 16 cancer hospitals. At Bangalore's HCG Hospital, radiation oncologist P.S. Sridhar is staring at a digital image of the insides of a patient's lung. At the click of the mouse, colour-coded lines highlight a cancerous growth close to the bronchus. With the help of advanced imaging technology, Sridhar can map the tumour, and plot exactly how it will be irradiated with minimal damage to healthy tissue. The patient, says Sridhar, has seen a recurrence of

Communication strategy for breast cancer prevention program

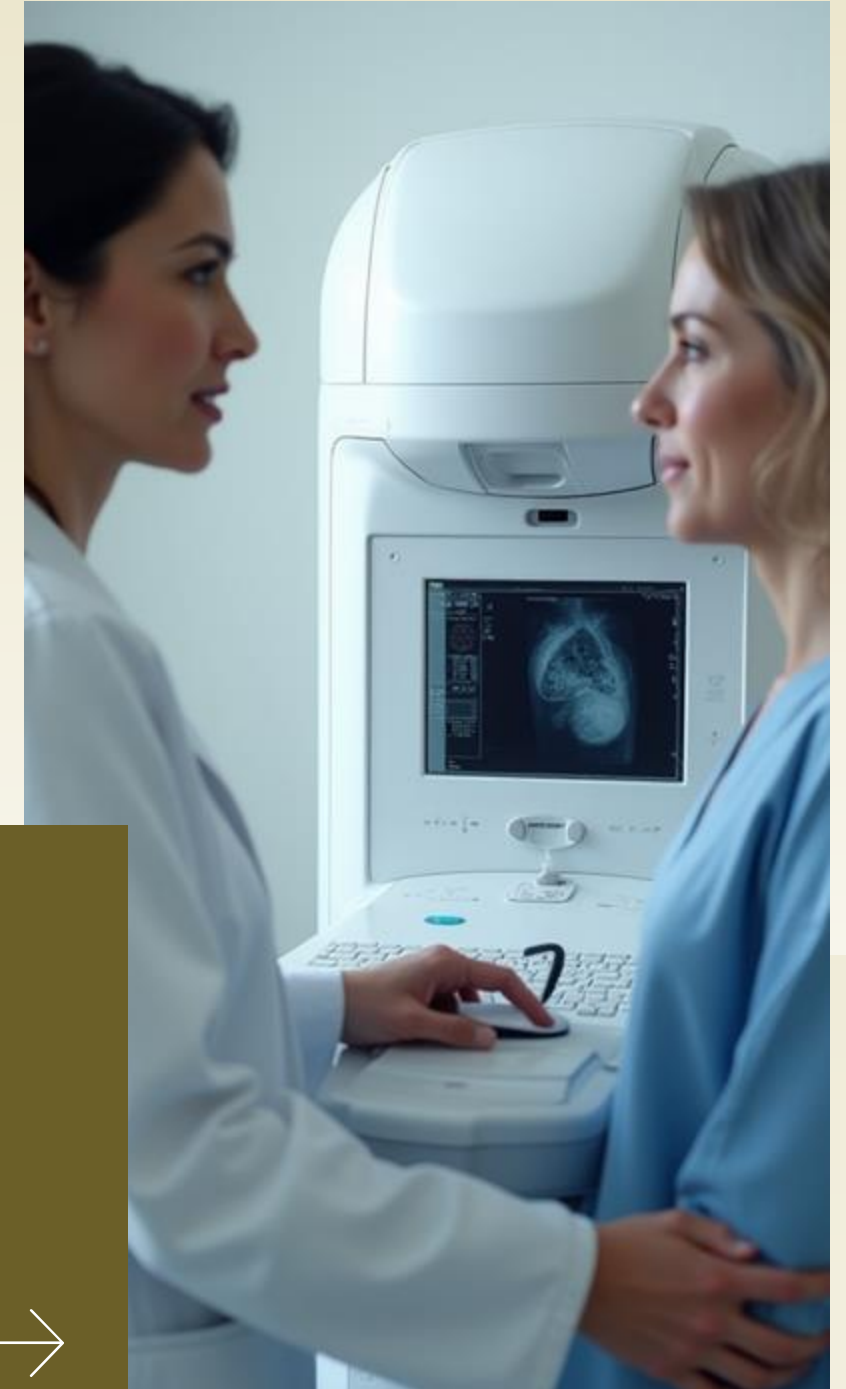

Screening for breast cancer

Digital mammography benefits

Early detection through digital mammography, recommended for women under 50, with dense breasts, or pre- /peri-menopausal.

Targeted Communication Strategy

All healthy women 40+

Use hospital database and incentives;

Promote at gynecologists and medical oncologists.

Target using TVC, TV scroll, cinema slides, magazine, press, radio

Women with lump found

Offer free checks; promote via medical literature, CMEs

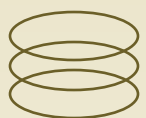

Case studies, and patient testimonials

Referral from gynecologists, GPs, and oncologists.

Women with family history

Cancer screening checks and camps

Target gynecologists with medical literature and promotional offers.

Launch of breast cancer program

Launch of a handbook to support breast cancer awareness and education.

Print communication

PINK HOPE
BREAST CANCER AWARENESS DR

Spend just 10 minutes every year protecting your breasts.

See your doctor if you notice any of these things in your breast:

- Lump, hard knot or thickening
- Swelling, warmth, redness or darkening
- Change in the size or shape
- Dimpling or puckering of the skin
- Itchy, scaly sore or rash on the nipple
- Pulling in of your nipple or other parts
- Nipple discharge that starts suddenly
- New pain in one spot that does not go away.

HCG, South Asia's largest cancer care network, brings you Digital Mammography for accurate and early diagnosis.

Get a Digital mammogram done annually if you are over 40 years old.

Breast Cancer can affect One out of 22 women.

One woman is diagnosed with Breast Cancer every 6.5 minutes.

Early diagnosis gives you a chance to lead a normal life.
